

December 12, 2011

Dear Amador Water Agency Customer:

This letter is to inform you of utility construction activity that will be occurring in your area over the next few months. The City of Sutter Creek will be constructing a new storm water diversion system in Broad Street this summer; which will improve drainage and relieve pressure on the existing facilities. Please contact the City of Sutter Creek with any questions you may have regarding the storm drain project.

The City's project requires the Agency to relocate the water lines running through Broad Street. In addition, the City is requiring the Agency (and PG&E) to have our facilities relocated by May 1, 2012.

During the month of December, you will see the Agency's Construction Department making preparations to begin the project. The Agency's portion of the project will begin in January. Construction will take place on Broad Street from Eureka Street to Gopher Flat Road and the intersections of Broadway and Randolph. The Agency's Construction Department will make every effort to minimize the impacts to drivers and residents. During construction, the Crew will cover trenches with plates each evening so that residents may access their driveways.

Residents and parents of children attending Sutter Creek Elementary should be advised that Broad Street will be barricaded at the Broad Street/Gopher Flat Road intersection during working hours. Alternative drop off and pick up procedures have been communicated to parents through the school's December 2011 newsletter. Please contact the school if you have any questions.

We apologize for any inconveniences you may experience during this project and, again, we will do our best to minimize the impacts to you. If you have any questions, please contact Chris McKeage, Field Services Manager (257-5248) or Don Hutchison, Construction Forman (257-5273).

Sincerely,

A handwritten signature in blue ink that reads 'Karen Gish'.

Karen Gish
